DETAILED ACTION

1. The location of your application in the PTO has changed. To aid in correlating papers for this application, all further correspondence regarding this application should be directed to Megan Jamroz in Art Unit 1644, Technology Center 1600.

Restriction Requirement

2. Please Note: In an effort to enhance communication with our customers and reduce processing time, Group 1640 is running a Fax Response Pilot for Written Restriction Requirements. A dedicated Fax machine is in place to receive your responses. The Fax number is 703-308-4315. A Fax cover sheet is attached to this Office Action for your convenience. We encourage your participation in this Pilot program. If you have any questions or suggestions please contact Paula Hutzell, Ph.D., Supervisory Patent Examiner at Paula.Hutzell@uspto.gov or 703-308-4310. Thank you in advance for allowing us to enhance our customer service. Please limit the use of this dedicated Fax number to responses to Written Restrictions.

3. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-12 and 22, drawn to an isolated nucleic acid molecule, vector, host cell, a method of making a polypeptide, and a kit; classified in Class 536, subclass 23.5; Class 435, subclasses 69.1, 325, 320.1, and 810.

II. Claims 13-15, drawn to an isolated polypeptide; classified in Class 530, subclass 350.

III. Claims 16 and 19, drawn to an antibody and a kit; classified in Class 530, subclass 387.9; and Class 435, subclass 810, respectively.

IV. Claims 17-18, drawn to a method of detecting the presence of a polypeptide in a sample; classified in Class 435, subclass 7.1.

V. Claims 20-21, drawn to a method of detecting the presence of a nucleic acid; classified in Class 435, subclass 6.

VI. Claims 23-24, drawn to a method for identifying a compound which binds to a polypeptide; classified in Class 435, subclass 7.1.

VII. Claim 25, drawn to a method of modulating the activity of a polypeptide; classified in Class 435, subclass 331.

VIII. Claim 26, drawn to a method of identifying a compound which modulates the activity of a polypeptide; classified in Class 436, subclass 501.

4. Groups I-III are different products. Nucleic acids, polypeptides, and antibodies differ with respect to their structures and physicochemical properties; therefore each product is patentably distinct.

Art Unit: 1644

5. Groups IV-VIII are different methods. The inventions as grouped in Groups IV-VIII are distinct, each from the other, because they represent different inventive endeavors as one does not suggest the other; therefore, each method is patentably distinct.

6. These inventions are distinct for the reasons given above. In addition, they have acquired a separate status in the art as shown by different classification and/or recognized divergent subject matter. Further, even though in some cases the classification is shared, a different field of search would be required based upon the structurally distinct products recited and the various methods of use comprising distinct method steps. Therefore restriction for examination purposes as indicated is proper.

7. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Megan Jamroz whose telephone number is (703) 308-8365.
